Group 5

Scope:

We intend this to be a campus based social networking app where individuals can message each other without sharing personal information like mobile numbers. Such functionality will be very helpful especially to freshers. Since it is a campus based networking app, it will also notify people of upcoming events.

Features:

The app will have the following functionalities:

1. **Profile:**
Basic public information like name, entry number, department, hostel, year, photo(optional), phone(optional).
2. **Search:**
Search people registered on the app based on their name or entry number.
3. **Group listings:**
Search for a group of people based on their department, hostel, year or clubs involved in.
4. **Messages:**
Individuals can send messages to other registered individuals. Messages from blocked people will not be received.
5. **Feed:**
The app will display a news feed which will inform the registered students about events in the campus and also notify them about upcoming events
6. **Add Event:**
The app will have a proper format to add an event in order to check multiple listings of the same event. The events added here will be the ones that will be displayed in news feeds.
7. **Block feature:**
The app will have a functionality to block/unblock another user, if desired. This will save people from getting spammed.
8. **Notifications:**
Registered students will be notified upon receiving new messages and upcoming events.
